< DETAIL >

Figure 1: The test setup

The test setup is used to measure the force required to pull the strip from the machine. The force is measured by a load cell, which is connected to a data acquisition system. The data acquisition system is connected to a computer, which records the force data. The force data is then used to calculate the force required to pull the strip from the machine.

Figure 2: The test setup

The test setup is used to measure the force required to pull the strip from the machine. The force is measured by a load cell, which is connected to a data acquisition system. The data acquisition system is connected to a computer, which records the force data. The force data is then used to calculate the force required to pull the strip from the machine.
