The figure consists of two side-by-side plots, labeled (a) on the left and (b) on the right. Both plots have a horizontal axis labeled 'x' ranging from 0 to 10 and a vertical axis labeled 'u' ranging from 0 to 1.0. A dashed vertical line is drawn at x=5 in both plots.

Plot (a) shows the state at t=0. The horizontal axis is marked with integers from 0 to 10. The vertical axis has a tick at 1.0. A single square cell at x=5 contains a red 'x' and is shaded gray, representing a value of 1.0. All other cells are white, representing a value of 0.0.

Plot (b) shows the state at t=1. The horizontal axis is marked with integers from 0 to 10. The vertical axis has a tick at 1.0. The distribution is now spread across the entire range from x=0 to x=10. The cells at x=0 and x=10 are shaded gray and contain a red 'x', representing a value of 1.0. The cells at x=1 and x=9 are white, representing a value of 0.0. The cells at x=2 through x=8 are shaded gray and contain a red 'x', representing a value of 0.5. This represents a uniform distribution of 0.5 across the range x=2 to x=8, with boundary values of 1.0 at x=0 and x=10.
