Industrial HMI

Industrial HMI is a device that allows operators to interact with and control industrial machinery and processes. It typically features a graphical user interface (GUI) that displays real-time data, status information, and control functions. Industrial HMIs are commonly used in manufacturing, process control, and automation applications. They provide a centralized point of control for complex systems, enabling operators to monitor and adjust parameters, start and stop processes, and respond to alarms and events. Industrial HMIs are designed to be rugged and reliable, often featuring touchscreens, buttons, and other input devices that are suitable for industrial environments. They are typically connected to the machinery they control via various communication protocols, such as Modbus, Profibus, and Ethernet/IP.
